

Calo High Voltage System Cabling Labels

This folder contains lists of CaloHV labels automatically generated by the `calohv_print_labels.py` Python script from the SNCabling package. There are several categories of labels:

- labels for *external HV harnesses* must be stuck on external HV harnesses at the Redel S Male side termination (patch panel).
- labels for *associations of external HV harnesses and CAEN HV boards* must be stuck on the external HV harnesses at the Radial connector side.
- labels for *internal HV harnesses* must be stuck on the the HV internal harnesses at the Redel S Female side termination (patch panel).
- labels for *associations of internal HV cables and PMTs* must be stuck on the individual HV cables at the PMT side.
