Calo Signal Cabling Labels

This folder contains lists of CaloSignal labels automatically generated by the `calosignal_print_labels.py` Python script from the SNCabling package. There are several categories of labels:

- labels for *external harnesses* must be stuck on external harnesses at both terminations (Wavecatcher FEB and patch panel).

- labels for *external cables* must be stuck on the individual cables at the patch panel side (MCX male connector).

- labels for *associations of external cables and Calo FEB channels* must be stuck on the external cables at the Wavecatcher FEB side (MCX male connector).

- labels for *internal harnesses* must be stuck on internal harnesses at both terminations (patch panel and PMT).

- labels for *internal cables* must be stuck on the individual cables at the patch panel side (MCX female connector).

- labels for *associations of internal cables and PMTs* must be stuck on the individual cables at the PMT side (Souriau pin).
